DALI RM8 PWM DALI RM8 1-10V DALI RM16 1-10V

Datenblatt

Interface for DALI to 10V PWM with SPST-relay

Converter module for the integration of 0-10V or 1-10V controlled ballasts in DALI lighting systems

Art. 86458668 (RM8 PWM) Art. 86458668-AN (RM8 1-10V) Art. 86458936 (RM16 1-10V PWM) Art. 86458667-DE (RM16 0-10V PWM)

DALI RMx PWM/1-10V Interface

Überblick

- For the integration of electronic ballasts with PWM input or 0-10V input
- An SPST-relay offers the possibility to power on/off the mains supply of the electronic ballast
- Types with PWM output offer the high noise immunity of digital signal transmission, suitable for electronic ballasts with PWM control input (e.g.: Meanwell HLG, HLN, NPF or LPF series)
- The type with analog output offers an automatic calibration algorithm for the output signal.
- Transformation of DALI 8-bit direct arc power level into PWM output signal (0-100%) or analog voltage (1-10V)
- DALI DT5 compatible: linear and logarithmic control characteristic

- DALI DT5: change of output range for PWM-type (0-100% / 10-100% PWM)
- Suitable for up to 5 ballast with 1mA input current each
- RM16 type for high inrush currents up to 160A
- The control of the SPST-relay is directly linked to the 8-bit direct arc power level. If the value is 0 the relay is OFF. At any other value the relay is ON.
- The module is supplied directly by the DALI signal line. An additional supply is not needed.
- The interface can be addressed and assigned to groups and scenes.
- galvanic isolation between DALI input and PWM or 1-10V output

Specification, Characteristics

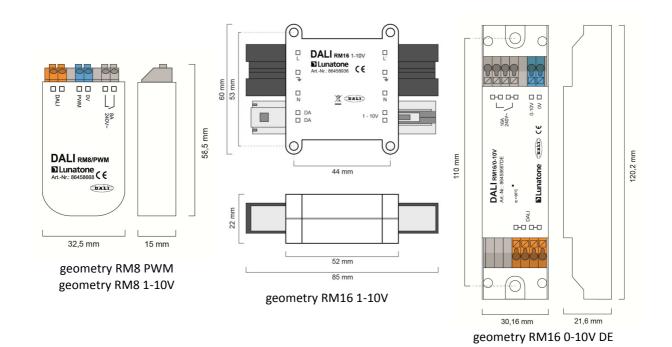

type	DALI RM8 1-10V	DALI RM8 1-10V	DALI RM16 1-10V	DALI RM16 0-10V PWM-DE	
article number	86458668	86458668-AN	86458936	86458667-DE	
supply	via DALI signal line				
typ. current consumption	2.5 mA				
input	DALI				
	0-100% PWM		0-100% PWM	0-100% PWM	
	(14Bit, 488Hz),	1-10V analog,	(14Bit, 488Hz),	(14Bit, 488Hz),	
output (0-10V)	current sink 5mA	current sink 1mA	current sink 5mA	current sink 5mA	
relay output switch on/off					
voltage	250Vac/400Vac				
maximum nominal load					
and current	2000VA / 8A	2000VA / 8A	4000VA / 16A	4000VA / 16A	
maximum inrush current	80A	80A	160A	160A	
type of relay contact	1 On/Off				
relay: number of					
switching operations at					
16A/250Vac, resistive	3x10 ⁴

maximum switching					
frequency	1 Hz				
temperature	0°C-45°C				
protection class	IP20				
connecting wire					
cross section	0,5-1,5 mm ²	0,5-1,5 mm ²	connector	0,5-1,5 mm ²	
mounting	back box	back box		remote ceiling	

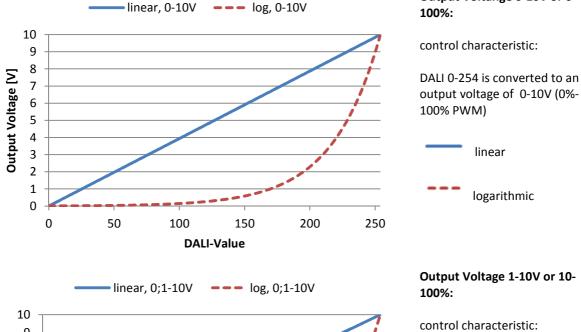

Output Voltange 0-10V or 0-

typical installation

9 8 Output Voltage [V] 7 6 5 4 3 2 1 0 0 50 100 150 200 250 **DALI-Value**

Hint: the voltage values in the characteristics are only valid if the device is supplied with 10V at the 0-10V output.

an output voltage <0,8V.

DALI 1-254 is converted to an

DALI 0 (=OFF) is converted to

ouput voltage of 1-10V (10%-100% PWM)

Installation

The module has to be connected directly with the DALI bus line. It does not need any additional supply. A typical value of the current consumption is ~2.5mA. For supplying components on a DALI line the installation of a DALI power supply (DALI PS) is required. The connection to the DALI line is polarity free. Types with PWM-output support sinking currents up to 5mA, the type with analog output sinking currents up to 1mA.

The SPST relay of the RM8 module support switching loads up to 2000VA. The RM16 type supports switching loads up to 4000VA and inrush currents up to 160A.

The terminals allow cross sections of the connecting wires from 0.5-1.5mm².

Function

The interface converts the desired DALI dim level into a corresponding PWM pattern or analog output voltage.

Up from firmware 2.0 device type 5 is supported. Therefore a linear and a logarithmic control characteristic are available. In addition for the PWM-Types the output range can be selected between 0-10V and 1-10V. The DALI value [0-254] is converted either linearly or logarithmic to the output range. The behaviour is shown in detail in the control characteristics.

The SPST-relay is directly linked to the 8-bit direct arc power level. If the value is 0 the relay is OFF, whereas at any other value [1...254] the relay is ON.

The combination of the 0-10V control signal and the additional SPST-relay offers the possibility to power on/off the mains supply of the 0-10V controlled electronic ballast.

In case of a system failure 100% (10V) are applied at the 0-10V control output. The

behaviour of the relay depends on the firmware version. In any case the relay holds the output state. In newer versions the system failure level can be set. The relay can be switched on or off or set to hold the current state (option available up from FW 3.5.0 at 86458667-DE, up from FW 3.3.0 at 86458668, and up from FW 1.3.0 at 86458668-AN).

DALI-Befehlssatz

The module is based on the standard for DALI Control Gear (IEC 62386-102) and Device Type 5 extension (IEC 62386-206). With few exceptions mentioned above the entire instruction set defined by the DALI standard is supported. Furthermore the newer versions already support the DALI2-command GOTO LAST ACTIVE LEVEL.

Auto Calibration Mode

In the DALI RM8 1-10V module with analog output an automatic calibration routine is implemented. After power up the module the stored calibration values are checked. If a new calibration is required a duration of up to 2 minutes has to be taken into account before the module can be used. The automatic calibration can be en-/disabled and triggered manually with the DALI Cockpit software tool. While the calibration is running the device does not react to any dimming commands.
